

Mod. *VTR Pro* ROTARY DRUM SCREEN

The Mod. *VTR Pro* Rotary Drum Screens are designed and assembled to be optimally suited for any operating situations and to be placed in different production environments. The Mod. *VTR Pro* Rotary Drum Screens are made for screening different materials, but it is with metals that they have demonstrated high qualities so far. This screen is created to guarantee practicality and versatility of use. The substructure is designed in order to adjust both its inclination and the working height. The highly strong structure of the loading hopper is shaped to effectively and gradually carry the material into the drum. During the loading phase, all shocks are absorbed thanks to elastic supports on which the loading hopper is installed. Furthermore, it is ready for a possible motovibrator installation. The exagon-shaped drum can be equipped with 4 independent sectors of screening nets, that by means of clamp fasteners, make practical and quick the configuration and/or the replacement. Each screen sector is provided with its own discharge hopper and according to the size, the user will decide which one to employ.

Configuration of the wide-open Mod. *VTR Pro* Rotary Drum Screen ready for use

The assembly phase of Mod. *VTR Pro* Rotary Drum Screen

Mod. *VTR Pro* Rotary Drum Screens are supplied complete with automation panel pre-arranged for remote command. Each screen is developed and produced to allow greater ease in maintenance phases, in line with all machines realised by **FGMTech**. Moreover, they can be customised and configured depending on specific customer
